

## Editorial Notes

*Journal of Physical Science* Vol. 29, Supp. 1 (2018) is a special issue resulting from the 6th International Conference for Young Chemists, organised on 16–18 August 2017 in Penang, Malaysia with the theme “Synergy and Emergence in Chemistry for a Better Tomorrow.” The event was organised with the aim to bring local and international researchers together to facilitate interaction and networking among researchers in the field of chemistry. This special issue features 16 articles contributed by various researchers, both local and international.

The selected articles herein cover mainly on the following research areas, but not limited to material science, polymer chemistry, electrochemistry, computational chemistry and catalysis. Focuses are on the development of the new features in chemistry, which covers among them: (1) the development of membrane filtration; (2) the progress in chemical sensors for gas detection; (3) the development in photocatalytic application of composites films; and (4) computer-aided structural simulations.

The publication of this *Journal of Physical Science* special issue has been realised through the support by the staff of Universiti Sains Malaysia’s School of Chemical Sciences, the postgraduate students of School of Chemical Sciences as the organiser of the 6th International Conference for Young Chemists, and the publisher, Penerbit Universiti Sains Malaysia.
